

COVER STORY

Liposomal citroflavonoids for efficient skin lightening

The cover picture shows bitter orange and grapefruit, the natural source for Lipoid Kosmetik's skin lightening agent Citrolumine 8®. Its proven activity is based on concentrated, liposomally encapsulated citroflavonoids which efficiently inhibit tyrosinase, an enzyme responsible for the production of the skin pigment melanin.

The application of Citrolumine 8® will be presented live at this year's in-cosmetics Asia in Bangkok. The formulation of a liposomal skin lightening cream with highly skin-protecting properties will be shown, combining Citrolumine 8® with Ginkgo LC Herbasol®, a standardised botanical extract from *Ginkgo biloba* with natural depigmentation agents and potent free radical scavenger activity.

We look forward to meeting you in the Interactive Formulation Lab at in-cosmetics Asia on Wednesday 4 November 2015, 12:45-13:45.
